

What are Mutations? 9/19

(What I think...)

- Genetic Mutation (atypical)
- GMDs (animal experimentation)

- GCTTA
- TGAAT

- Physical or not
- Modifications in DNA

5 Types of Mutations

1) Deletion = when 1 or more bases are not copied.

2) Inversion = bases copied in the wrong order.

3) Duplication = when 1 or more bases are added to DNA chain

4) Insertion = when extra bases are added anywhere in DNA chain
